

Environmental Policy

CBI-electric: low voltage (CBI) recognises the impact of its operations on the environment and is committed towards continual improvement and prevention of pollution. The organisation continually strives to improve its activities, products and services where applicable, with the objective of minimising our impact on the environment.

CBI is committed to complying with the relevant legal, regulatory and statutory requirements, while also subscribing to our industry standards. Where practicable, CBI continually strives to adopt environmental best practice methodologies. CBI's Environmental Policy shall be communicated to all employees, including interested and affected parties.

We strive to achieve these commitments by:

- Investing in Research and Development to create energy-efficient and eco-friendly solutions to help our customers minimise their environmental impact.
- Setting environmental objectives and targets, including the measurement and monitoring thereof.
- Providing appropriate environmental awareness and training to all employees, and encouraging environmentally-conscious continual improvement.
- Promoting environmental best practices, and where possible, selecting suppliers committed to sound environmental methods.
- Reducing our environmental footprint, through the prevention and mitigation of environmental impacts (soil, air and water pollution, emissions and waste); reduction in energy and natural resources consumption; and reducing and/or eliminating hazardous substances in our products.
- Adhering to the Restriction of Hazardous Substances (RoHS) directives as adopted by the European Union through Directives 2002/95/EC; 2011/65/EC and 2015/863/EU directives.
- Being in compliance with the European Union Directive 1907/2006 on the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH).
